ABOUT ME

Dedicated Flutter Developer with 2+ years of experience in building scalable, high-performance mobile applications. Backed by a strong foundation in Python for backend development, I specialize in implementing Clean Architecture principles to create robust, maintainable systems. I am proficient in designing fluid, user-centric interfaces and developing solid application logic. My focus is on delivering high-quality mobile solutions that meet user needs, generate real value, and drive tangible impact..

TECHNICAL SKILLS

Mobile Application Development — Advanced

Flutter/Dart, State Management: Provider, BLOC, API Integration (HTTP, Dio), WebSocket, Push Notifications (FCM, Local), Local Storage & Secure Storage, Offline-first Architecture, Device Sensors, Google Maps & Mapbox, Background/Foreground Servisler, SDK Geliştirme, UI/UX Principles, Responsive & Adaptive Design, Custom Widget Development

Backend & API Development — Advanced

Python, FastAPI, Flask, Django, RESTful API

Architectural & Software Principles — Advanced

Clean Architecture, MVC, MVVM, SDLC, Data Structures and Algorithms (Java)

Tools & Platforms — Proficient

Git, GitHub, GitLab, Trello, Nginx, Ngrok, Postman & Newman (API Manual ve Automated Testing), Canva, Figma

Security & Deployment — Expert

App Security Best Practices, Token & Authentication Management, Play Store & App Store Publishing

Databases — Advanced

PostgreSQL, MySQL, SQLite, Firebase

Cloud & Services — Advanced

Firebase (Authentication, Firestore, Realtime Database, Cloud Functions), Google Cloud Platform (GCP), Railway, Render

WORK EXPERIENCE

TÜBİTAK 1001 Project Scholar, Mobile Application Developer

26/03/2025 – Present | TÜRKİYE

- Developed a high-performance mobile application using Flutter, featuring real-time location tracking, live monitoring, Google Maps visualization, and multi-threaded data processing.
- Engineered robust background services to ensure continuous application performance and seamless operation under heavy workloads.
- Integrated WebSockets to collect, process, and synchronize real-time data from IoT sensors with the backend infrastructure.
- Optimized data pipelines between mobile IoT data collection, APIs, and databases to enhance synchronization efficiency.
- Engineered a resilient offline communication and navigation ecosystem, featuring a secure, BLE-based peer-to-peer group chat with End-to-End Encryption (E2EE), and a precise localization and orientation system leveraging Bluetooth RSSI and Magnetometer data.
- Managed backend integration processes, ensuring high standards for real-time data processing, security, and data integrity.
- Coordinated cross-functional teams, facilitating technical integration and communication between AI research and backend engineering units.

VİSİHT TECHNOLOGY, Software Engineer Intern

20/01/2025 – 20/10/2025 | KOCAELİ, TÜRKİYE

- Developed the "DigiVis" mobile application using Flutter, implementing secure biometric authentication through MRZ (Machine Readable Zone) and NFC reading.
- Implemented automated identity verification by applying Computer Vision algorithms to enhance security protocols.
- Designed and managed backend services, optimizing biometric data processing and real-time validation workflows.
- Built a comprehensive Admin Panel for centralized system management, including log tracking, user management, and operational monitoring.
- Integrated NFC-enabled passports and ID cards into mobile solutions, ensuring a seamless and secure digital identity verification experience.

EDUCATION

M.Sc. in Software Engineering, Kocaeli University

10/09/2025 – Present | Kocaeli, Türkiye

B.Sc. in Computer Engineering, BARTIN University

11/10/2021 – 24/06/2025 | Bartın, Türkiye

GPA: 3.42/4.00 | Thesis: AI-Powered Financial System for the Visually Impaired

AI Application Development Program (1-Year Scholarship) | AI and Technology Academy

01/11/2024 – 01/09/2025

PROJECTS

- TurVia | Smart Tourism & Navigation App**, Developed a comprehensive mobile tourism application featuring **smart routing**, real-time recommendations, and personalized trip planning, and a tour management system with secure in-app payments and real-time operational workflows.
Tech Stack: Flutter, Clean Architecture, Bloc/Cubit, FastAPI, Mapbox, Dio, get it, iyzico/Stripe
Links: [Google Play](#) | [App Store](#)
01/06/2025 – Present
- KURTAR | IoT & AI-Based Disaster Response Platform**, Developed a disaster response mobile application that provides real-time decision support by integrating IoT, mobile sensors, and AI technologies.
Tech Stack: Flutter, Provider, Clean Architecture, Dio, IoT, AI Models, Background/Foreground Services, Secure Storage, SQLite, Bluetooth, Push Notifications, Google Maps, Multi-language Support, RBAC
Links: [Testflight](#) | [APK](#)
26/03/2025 – Present

- Kurtar Saha Operasyon | Field Data & AI Inference Suite**, Developed an integrated ecosystem consisting of two independent mobile applications for seismic research: a field data acquisition tool for high-frequency sensor logging with precision sampling control (Hz) and time-series windowing, and an AI inference app for real-time model validation. Both integrated via a WebSocket-based architecture for seamless data streaming and synchronization with the command dashboard.
Tech Stack: Flutter, Sensor Framework, Multi-threading, Time-Series Preprocessing, WebSockets, SQLite, AI Inference.
Links: [Available upon request](#); [pending academic paper publication](#)
 - DigiVis | Digital Onboarding & KYC SDK**, Developed a secure digital onboarding SDK for remote customer verification on iOS and Android platforms. The solution integrates high-fidelity camera capture with advanced Liveness Detection and Face Matching algorithms for identity verification, complemented by a centralized dashboard for real-time administrative oversight.
Tech Stack: Flutter, FastAPI, PostgreSQL, MVVM, BLOC, Camera, Text-to-Speech (TTS), Multi-language Support, OpenCV, Google ML Kit
Links: [Available upon request](#)
 - IbanVault | Secure IBAN Management Utility**, Developed a Flutter application using an offline-first approach that provides secure IBAN storage using an encrypted local database. The application includes QR code generation/scanning and multi-language support features.
Tech Stack: Flutter, MVC, Provider, Encrypted Local Storage, QR Code Scanner/Generator, Multi-language Support
Links: [APK](#)
 - Vakit | Location-Based Prayer Times App**, Developed a multilingual prayer times app that supports GPS and manual city selection, and provides timely local notifications.
Tech Stack: Flutter, Bloc, Hive, Local Notifications
Links: [APK](#)
 - AI-Powered Financial System for the Visually Impaired (Undergraduate Graduation Project)**, Using YOLOV5, I developed a mobile application that provides money recognition and financial management for visually impaired users.
Tech Stack: Flutter, Firebase, Provider, YOLOV5
Links: [Available upon request](#).

01/01/2026 – 20/06/2026

01/03/2025 – 30/05/2025

01/05/2025 – 21/06/2025

01/07/2025 – 21/12/2025

CERTIFICATIONS

Mobile Application Development with Google Flutter, BTK Academy	01/07/2024 – 10/09/2024
Python Programming: From Beginner to Advanced, BTK Academy	25/07/2023 – 28/09/2023

HONORS & AWARDS

Certificate of Honor, Bartın University Awarded for outstanding academic performance and graduating with an Honor Degree in Computer Engineering.	24/06/2025
